## Education

|                                                                                                                                   |                               |
|-----------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>New York University</b><br><i>Ph.D. in Electrical and Computer Engineering, Advisor: <a href="#">Theodore S. Rappaport</a></i> | <i>Sept. 2023 – Present</i>   |
| <b>New York University</b><br><i>M.S. in Electrical Engineering [<a href="#">Thesis</a>]</i>                                      | <i>Sept. 2023 – May 2025</i>  |
| <b>Chongqing University of Posts and Telecommunications</b><br><i>B.E. in Communication Engineering (Hons)</i>                    | <i>Sept. 2019 – Jun. 2023</i> |

## Research Experience

|                                                                                                                                                                   |                             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>NYURay: Python-Based Ray Tracer for Wireless Channel Prediction</b><br><i>Research Advisor: Prof. <a href="#">Theodore S. Rappaport</a> (IEEE Life Fellow)</i> | <i>Sept. 2024 – Present</i> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|

- Implemented reflection, diffraction, penetration, and scattering propagation mechanisms in a Python-based calibrated ray tracer for high-fidelity site-specific channel prediction across the upper mid-band spectrum.
- Developed GPU-accelerated ray tracing algorithms achieving  $100\times$  speedup, enabling simulation of  $10^6$  rays in complex environments in under 3-5 seconds per TX-RX pair.
- Created 3D visualization tools for spatial channel analysis, including transmitter-receiver placement, antenna radiation patterns, and antenna orientation.

|                                                                                                                                                                                 |                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>Material-Aware 3D Reconstruction for Wireless Ray Tracing</b><br><i>Research Advisor: Prof. <a href="#">Theodore S. Rappaport</a> and Prof. <a href="#">David Fouhey</a></i> | <i>Sept. 2023 – Present</i> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|

- Developed an automated framework generating ray-tracing-compatible 3D models with electromagnetic material properties from RGB video, reducing reconstruction time from months to a few hours.
- Integrated MAST3R-SLAM point cloud generation, PTv3 semantic segmentation, and Qwen3-VL vision-language model to automatically classify and label the object materials.
- Validated framework via dual-band measurements (6.75 GHz, 16.95 GHz) across 12 TX-RX locations in a 700 m<sup>2</sup> factory using NYURay ray tracer, achieving comparable RMSE to manual baseline.

|                                                                                                                                           |                            |
|-------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>Waste Factor: A New Metric for Evaluating Power Efficiency</b><br><i>Research Advisor: Prof. <a href="#">Theodore S. Rappaport</a></i> | <i>Jan. 2023 – Present</i> |
|-------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|

- Developed a novel metric, Waste Factor (W), to evaluate power efficiency in ANY cascaded systems.
- Enhanced Waste Factor for data center energy efficiency analysis.
- Extended the metric to analyze MIMO systems and simulated the distributed MU-MIMO system's energy efficiency and total power consumption.

|                                                                                                                                       |                             |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>FR3 Radio Propagation Measurement and Channel Modeling</b><br><i>Research Advisor: Prof. <a href="#">Theodore S. Rappaport</a></i> | <i>Nov. 2023 – May 2024</i> |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|

- Conducted comprehensive FR3 measurement campaigns at NYU for 6.75 GHz and 16.95 GHz [[Video](#)].
- Developed statistical channel models for outdoor, indoor, and factory environments.
- Performed penetration loss and cross-polarization discrimination (XPD) measurements.

|                                                                                                                                                                                                       |                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>Capacity of a Binary Channel with a Time-Bounded Adversary</b> 🧠<br><i>Research Advisor: Prof. <a href="#">Sundeep Rangan</a> (IEEE Fellow) and Prof. <a href="#">Elza Erkip</a> (IEEE Fellow)</i> | <i>Feb. 2024 – Present</i> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|

- Derived worst-case adversarial capacity for binary input memoryless channels where adversaries overwrite a fraction of symbols, modeling hardware errors and receiver attacks.
- Achieved capacity using random interleaver with thresholded LLR decoder via infinite shared randomness for coordinated interleaving, enabling direct implementation on existing standard decoder architectures.
- Validated both theoretical and practical capacity through AWGN simulations with M-QAM modulation and LDPC codes, showing worst-case adversaries maximize disruption by targeting highly reliable bits.

## Experience

---

### 6G Wireless and Machine Learning Engineer

MediaTek USA Inc.

May 2024 – Aug. 2024

Warren, NJ

Supervisor: [Doru Calin](#), AVP, Head of U.S. 6G Wireless Research Center

- Collaborated with the research team on TN-NTN coexistence solutions.
- Developed joint beamforming algorithms for TN-NTN coexistence and interference management.

### 6G Wireless and Machine Learning Engineer

MediaTek USA Inc.

May 2025 – Aug. 2025

Warren, NJ

Supervisor: [Doru Calin](#), AVP, Head of U.S. 6G Wireless Research Center

- Contributed to the development of MediaTek's internal ray-tracing tool and validated simulation results against real-world measurements.
- Built automated indoor reconstruction pipelines and performed ray-tracing simulations for outdoor-to-indoor coverage prediction across entire buildings.

## Technical Skills

---

**Programming:** Python, MATLAB, C/C++, L<sup>A</sup>T<sub>E</sub>X, HTML, JavaScript

**ML/CV Frameworks:** PyTorch, TensorFlow, OpenCV, Open3D

**Tools & Software:** Blender, MeshLab, Cadence Virtuoso, HFSS, Altium Designer, Power BI, Inkscape

**Research Areas:** Channel Modeling, Ray Tracing, 3D Reconstruction, Energy Efficiency, Information Theory

## Honors and Awards

---

- **Best Paper Award**, IEEE Global Communications Conference (GLOBECOM) 2023
- **Li Publication Award**, NYU Tandon School of Engineering
- **National Scholarship**, Chinese Government (Top 1%)
- **Ernst Weber Fellowship**, Department of Electrical and Computer Engineering, NYU
- **Meritorious Winner**, International Mathematical Contest in Modeling (MCM), 2022
- **National Second Prize**, Contemporary Undergraduate Mathematical Contest in Modeling, 2021

## Professional Activities

---

**Journal Reviewer** (31 completed reviews across 11 journals, 2024–2026)

- Proceedings of the IEEE; IEEE Transactions on Wireless Communications, on Antennas and Propagation, on Communications, and on Vehicular Technology; IEEE Wireless Communications Magazine; IEEE Communications Magazine; IEEE Communications Letters; IEEE Wireless Communications Letters; IEEE Open Journal of the Communications Society; China Communications

**Technical Program Committee**

- TPC Member, IEEE International Conference on Communications (ICC) 2026, Wireless Communications Symposium
- TPC Member, IEEE Global Communications Conference (GLOBECOM) 2025, Selected Areas in Communications: Terahertz Communications
- TPC Reviewer, International Conference on Wireless Communications and Signal Processing (WCSP) 2025

**Conference Reviewer** (5 completed reviews, 2023–2025): IEEE Global Communications Conference (GLOBECOM) 2025; IEEE International Conference on Communications (ICC) 2026; International Conference on Wireless Communications and Signal Processing (WCSP) 2023, 2025
