Education

New York University *Sept. 2023 – Present*
Ph.D. in Electrical and Computer Engineering, Advisor: Theodore S. Rappaport
New York University *Sept. 2023 – May 2025*
M.S. in Electrical Engineering (completed en route to Ph.D.) [Thesis]
Chongqing University of Posts and Telecommunications *Sept. 2019 – Jun. 2023*
B.E. in Communication Engineering (Hons)

Research Experience

NYURay: Python-Based Ray Tracer for Wireless Channel Prediction *Sept. 2024 – Present*
Research Advisor: Prof. Theodore S. Rappaport (IEEE Life Fellow)

- Implemented reflection, diffraction, penetration, and scattering propagation mechanisms in a Python-based calibrated ray tracer for high-fidelity site-specific channel prediction across the upper mid-band spectrum.
- Developed GPU-accelerated ray tracing algorithms achieving 100× speedup, enabling simulation of 10^6 rays in complex environments in under 3-5 seconds per TX-RX pair.
- Created 3D visualization tools for spatial channel analysis, including transmitter-receiver placement, antenna radiation patterns, and antenna orientation.
- Developed SPARC, a sparse path-aware residual calibrator that corrects per-path ray-tracing power errors using a small set of measurements.

Material-Aware 3D Reconstruction for Wireless Ray Tracing *Sept. 2023 – Present*
Research Advisor: Prof. Theodore S. Rappaport and Prof. David Fouhey

- Developed an automated framework generating ray-tracing-compatible 3D models with electromagnetic material properties from RGB video, reducing reconstruction time from months to a few hours.
- Integrated MASt3R-SLAM point cloud generation, PTv3 semantic segmentation, and Qwen3-VL vision-language model to automatically classify and label the object materials.
- Validated framework via dual-band measurements (6.75 GHz, 16.95 GHz) across 12 TX-RX locations in a 700 m^2 factory using NYURay ray tracer, achieving comparable RMSE to manual baseline.

Waste Factor: A New Metric for Evaluating Power Efficiency *Jan. 2023 – Present*
Research Advisor: Prof. Theodore S. Rappaport

- Developed a novel metric, Waste Factor (W), to evaluate power efficiency in ANY cascaded systems.
- Enhanced Waste Factor for data center energy efficiency analysis.
- Extended the metric to analyze MIMO systems and simulated the distributed MU-MIMO system's energy efficiency and total power consumption.

FR1(C) and FR3 Radio Propagation Measurement and Channel Modeling *Nov. 2023 – Present*
Research Advisor: Prof. Theodore S. Rappaport

- Conducted comprehensive FR3 measurement campaigns at NYU for 6.75 GHz and 16.95 GHz [Video].
- Developed statistical channel models for outdoor, indoor, and factory environments.
- Performed penetration loss and cross-polarization discrimination (XPD) measurements.
- Conducted 3.7 GHz FR1(C) campaigns in UMi, InH, and InF environments with a 1 GHz sliding-correlator channel sounder (ICC 2027, in submission).

Capacity of a Binary Channel with a Time-Bounded Adversary *Feb. 2024 – Present*
Research Advisor: Prof. Sundeep Rangan (IEEE Fellow) and *Prof. Elza Erkip (IEEE Fellow)*

- Derived worst-case adversarial capacity for binary input memoryless channels where adversaries overwrite a fraction of symbols, modeling hardware errors and receiver attacks.
- Achieved capacity using random interleaver with thresholded LLR decoder via infinite shared randomness for

coordinated interleaving, enabling direct implementation on existing standard decoder architectures.

- Validated both theoretical and practical capacity through AWGN simulations with M-QAM modulation and LDPC codes, showing worst-case adversaries maximize disruption by targeting highly reliable bits.

Experience

6G Wireless and Machine Learning Engineer *May 2024 – Aug. 2024*
MediaTek USA Inc. *Warren, NJ*
Supervisor: Doru Calin, AVP, Head of U.S. 6G Wireless Research Center

- Collaborated with the research team on TN-NTN coexistence solutions.
- Developed joint beamforming algorithms for TN-NTN coexistence and interference management.

6G Wireless and Machine Learning Engineer *May 2025 – Aug. 2025*
MediaTek USA Inc. *Warren, NJ*
Supervisor: Doru Calin, AVP, Head of U.S. 6G Wireless Research Center

- Contributed to the development of MediaTek's internal ray-tracing tool and validated simulation results against real-world measurements.
- Built automated indoor reconstruction pipelines and performed ray-tracing simulations for outdoor-to-indoor coverage prediction across entire buildings.

Technical Skills

Programming: Python, MATLAB, C/C++, LaTeX, HTML, JavaScript
ML/CV Frameworks: PyTorch, TensorFlow, OpenCV, Open3D, Docker, VLM, LoRA
Tools & Software: Blender, MeshLab, Cadence Virtuoso, HFSS, Altium Designer, Power BI, Inkscape
Research Areas: Channel Modeling, Ray Tracing, 3D Reconstruction, RIS, Energy Efficiency, Information Theory

Honors and Awards

- **Best Paper Award**, IEEE Global Communications Conference (GLOBECOM) 2023
- **Li Publication Award**, NYU Tandon School of Engineering
- **National Scholarship**, Chinese Government (Top 1%)
- **Ernst Weber Fellowship**, Department of Electrical and Computer Engineering, NYU
- **Meritorious Winner**, International Mathematical Contest in Modeling (MCM), 2022
- **National Second Prize**, Contemporary Undergraduate Mathematical Contest in Modeling, 2021

Professional Activities

Journal Reviewer

- Proceedings of the IEEE; IEEE TWC; IEEE TCOM; IEEE TAP; IEEE TVT; IEEE Wireless Communications Magazine; IEEE Communications Magazine; IEEE Communications Letters; IEEE WCL; IEEE OJ-COMS; China Communications

Technical Program Committee

- TPC Member, IEEE International Conference on Communications (ICC) 2026
- TPC Member, IEEE Global Communications Conference (GLOBECOM) 2025
- TPC Reviewer, International Conference on Wireless Communications and Signal Processing (WCSP) 2025

Conference Reviewer: IEEE GLOBECOM 2025; IEEE ICC 2026; WCSP 2023, 2025
